figure defined by the second figure data and drawn by the scan-projection strategy are arranged on the specimen, a computing unit configured to calculate, on the basis of the pattern data, the amount of correction for correcting the drawing dimensions of the first figure on the specimen and the drawing dimensions of the second figure on the specimen; and a control unit configured to control the dose of beam at each position on the specimen on the basis of the calculated amount of correction, in combination with the remaining aspects of the claim. Since this aspect is not disclosed nor taught in the prior art of record, independent claim 1, and dependent claims 2-8 are deemed allowable over the prior art of record.
